## Apps

### cCalc™

Available for: iPad®

**Calculate change across your network.**

With cCalc™ from CommScope, it's simple.

The cCalc app integrates the most popular and useful network calculators into one easy-to-use mobile solution.

Dispensing with traditional spreadsheet tools that make calculations cumbersome and time-consuming, cCalc offers users a seamless, interactive process that logs calculations for an endless number of measurements across your enterprise or wireless network.

**cCalc launches with Link Loss Calculator.**

With its attractive, graphical interface, cCalc makes using any tool straightforward and intuitive. Plus, you can exchange projects between users, define and save favorite configurations for future use, and export data to .csv format. It's all at your fingertips with cCalc.

cCalc is a continually expanding suite of network tools, anchored by Link Loss Calculator, which determines the maximum acceptable loss for each optical link within a fiber optic cabling system.

Easier. Faster. More flexible. cCalc from CommScope. The better way to calculate change across your network.
